

Autoimmun hepatitis: diagnostiek en behandeling

Dr. M. Biewenga

Wie ben ik?

- Promotieonderzoek naar AIH in LUMC
- Heden werkzaam als AIOS Medische Microbiologie Erasmus MC/RdGG

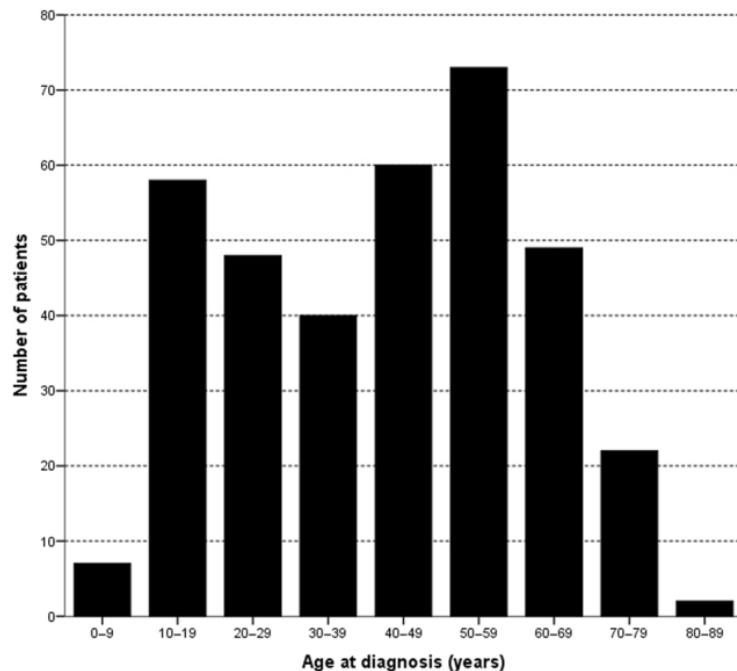

Presentatie & Diagnostiek

Autoimmuun hepatitis

- Zeldzame oorzaak van leverontsteking
- Voornamelijk bij vrouwen
- Kan zich presenteren op elke leeftijd
- Gekenmerkt door:
 - Verhoogd AST/ALT
 - Verhoogd IgG
 - Autoantistoffen
 - Interface hepatitis op het leverbiopt

Presentatie

- Symptomen
 - Acute hepatitis
 - Chronische aspecifieke symptomen
 - Asymptomatisch

Presentatie

- Symptomen
 - Acute hepatitis
 - Icterus
 - Tekenen van leverfalen
 - Verlengd INR
 - Ascites
 - Encephalopathie
 - Chronische aspecifieke symptomen
 - Asymptomatisch

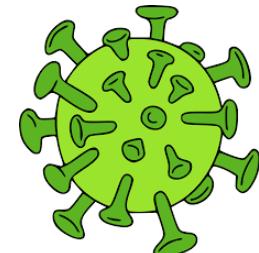

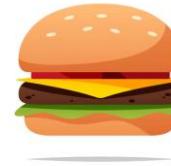

Presentatie

- Symptomen
 - Acute hepatitis
 - Icterus
 - Tekenen van leverfalen
 - Chronische aspecifieke symptomen
 - Vermoeidheid
 - Aspecifieke buikpijn
 - Gewrichtsklachten
 - Asymptomatisch
 - Verhoogde leverenzymen door de huisarts

Diagnose

- Hepatitis heeft een brede differentiaal diagnose
- Alcohol
- Virale hepatitis
- Leververvetting
- Toxisch medicamenteus
- Autoimmuun hepatitis

Aanvullend onderzoek middels lab en leverbioptie

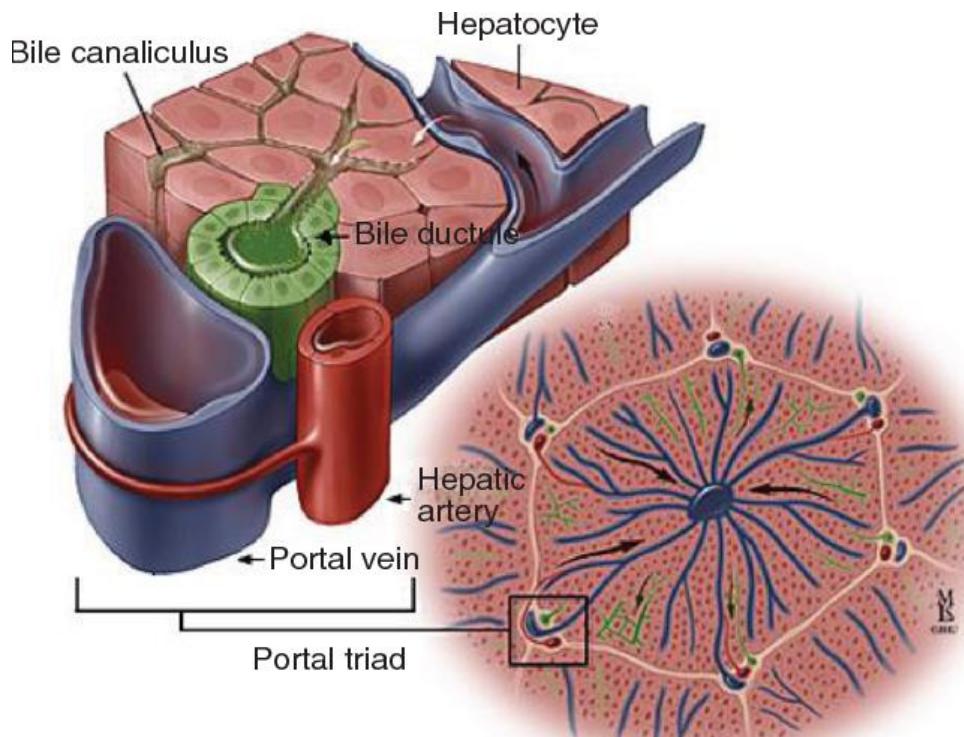

Laboratoriumafwijkingen

TABLE 1 Baseline characteristics of derivation and validation cohort

| | Derivation cohort | n = 396 |
|------------------------------|-------------------|---------|
| Female (%) | 303 (77%) | 396 |
| Median age in years (range) | 46 (5–84) | 396 |
| Blood tests (median [range]) | | |
| Serum IgG level in g/l | 22 (6.7–92) | 371 |
| Anti-SMA positive (%) | 220 (64%) | 346 |
| ANA positive (%) | 244 (69%) | 355 |
| Anti-SLA positive (%) | 21 (6%) | 332 |
| Bilirubin in µmol/L | 38 (3–596) | 244 |
| ALT in IU/l | 404 (13–3478) | 359 |
| AST in IU/l | 462 (19–4388) | 253 |
| AP in IU/l | 150 (27–2197) | 355 |
| GGT in IU/l | 152 (2–1317) | 245 |
| Albumin in g/l | 38 (13–53) | 298 |
| Creatinine in µmol/L | 71 (27–561) | 302 |
| Platelets in × 10e9/l | 192 (37–649) | 229 |
| PT in seconds | 14.6 (9.7–35.2) | 217 |
| INR | 1.1 (0.9–4.3) | 154 |

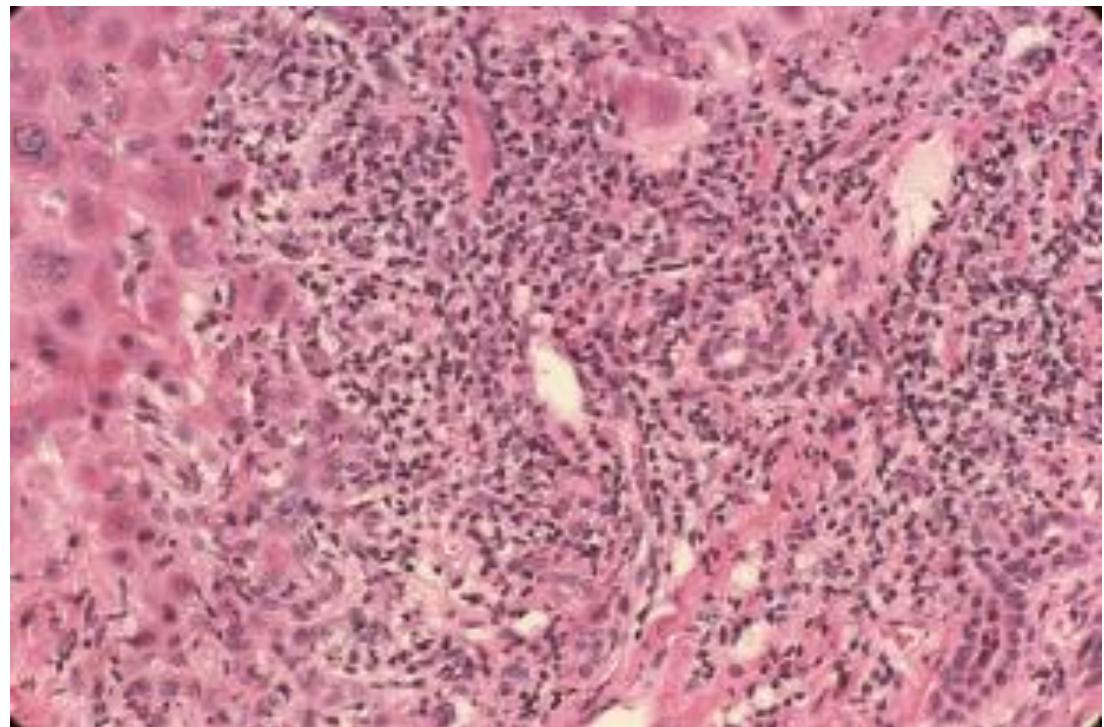

Ref: Development and validation of a prognostic score for long-term transplant-free survival in AIH type 1; UEGJ jul 2021

Leverbiopsie

Leverbiopsie

- Interface hepatitis
- Plasmacellen
- Relatieve sparing van de galwegen
- Mate van fibrose

Simplified criteria AIH

| Feature/parameter | Discriminator | Score |
|-----------------------------|---------------------------|-------|
| ANA or SMA + | $\geq 1:40$ | +1* |
| ANA or SMA + | $\geq 1:80$ | +2* |
| Or LKM + | $\geq 1:40$ | |
| Or SLA + | Any titre | |
| IgG or immunoglobulin level | >Upper limit of normal | +1 |
| | $>1.1 \times$ Upper limit | +2 |
| Liver histology | Compatible with AIH | +1 |
| | Typical of AIH | +2 |
| Absence of viral hepatitis | No | 0 |
| | Yes | +2 |

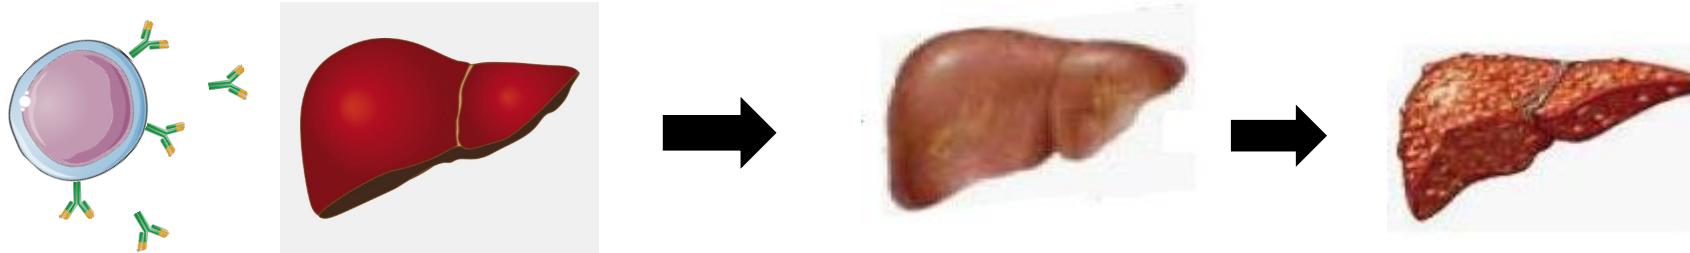

≥ 6 points: probable AIH; ≥ 7 points: definite AIH.

*Addition of points achieved for all antibodies (maximum 2 points).

ANA, antinuclear antibody; LKM, liver kidney microsomal antibody; SLA, soluble liver antigen; SMA, smooth muscle antibody.

Levercirrose

Levercirrose

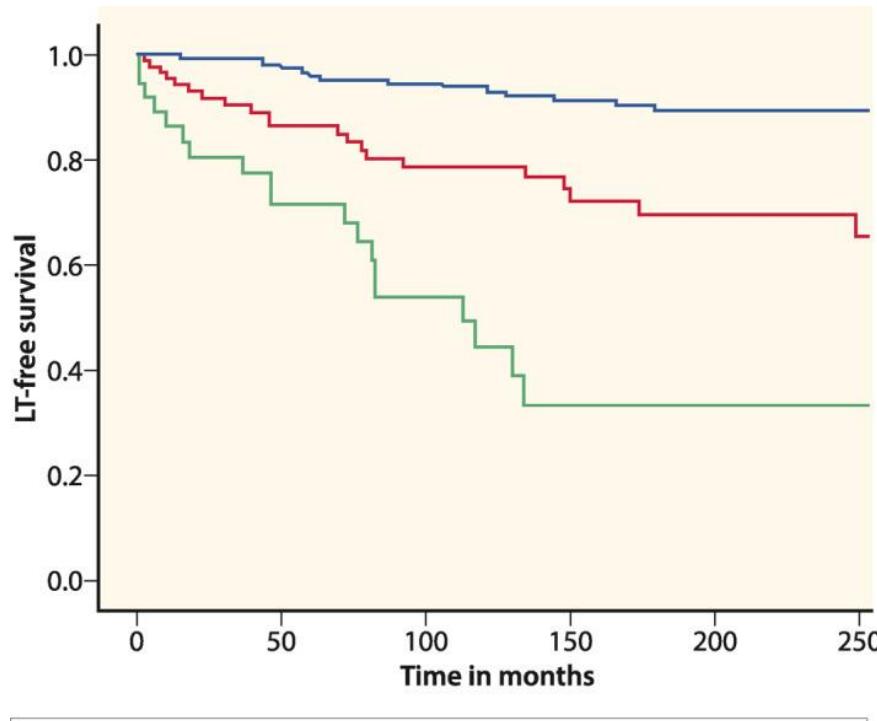

- Ongeveer 1 op de 3 patiënten heeft levercirrose bij diagnose
- Levercirrose kan leiden tot decompensatie
 - Ascites
 - Varices
 - Hepatocellulair Carcinoom
 - Encephalopathie
 - Hepatopulmonaal syndroom
 - Enz.

Fibrose en cirrose bepalen

- Gouden standaard: leverbiopsie
- Non-invasieve alternatieven
 - Fibroscan
 - Bloedmarkers
 - Fibrosemarkers: PIIINP, TIMP-1, MMPs
 - ELF score (PIINP, hyaluronzuur, TIMP-1)
 - FIB-score (Leeftijd, AST, ALT, platelets)
 - AST/Platelet ratio
 - AST/ALT ratio

Invloed van cirrose op overleving

Retrospectieve studie
Cohort n=396 AIH patiënten

— No cirrhosis — Compensated cirrhosis — Decompensated cirrhosis

Ref: Development and validation of a prognostic score for long-term transplant-free survival in AIH type 1; UEGJ jul 2021

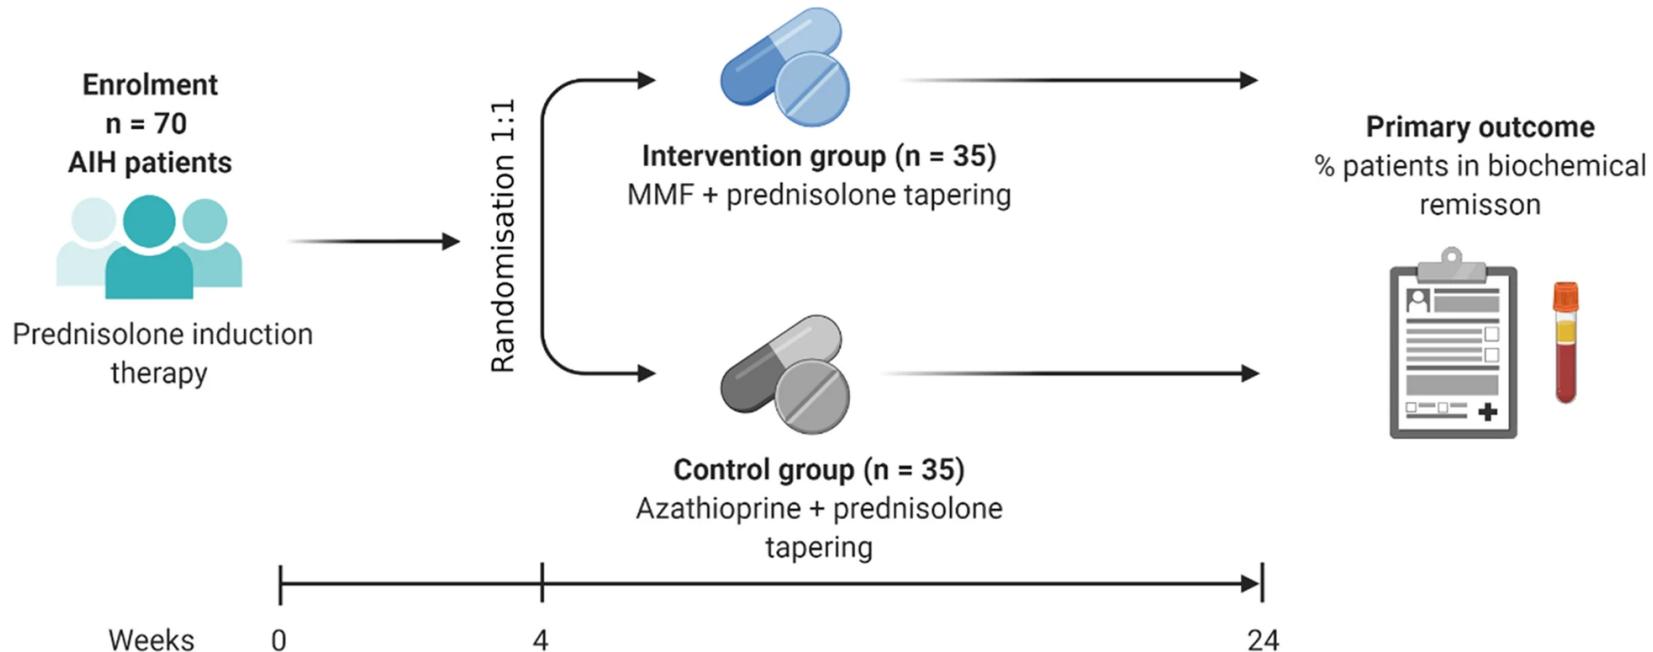

Behandeling

Behandeling

- Inductiebehandeling
 - Hoge dosering prednison of budesonide
- Onderhoudsbehandeling
 - Azathioprine
 - Bij onvoldoende effect of bijwerkingen
 - 6-TG
 - Mycophenolaat
 - Tacrolimus
- Levertransplantatie als laatste optie

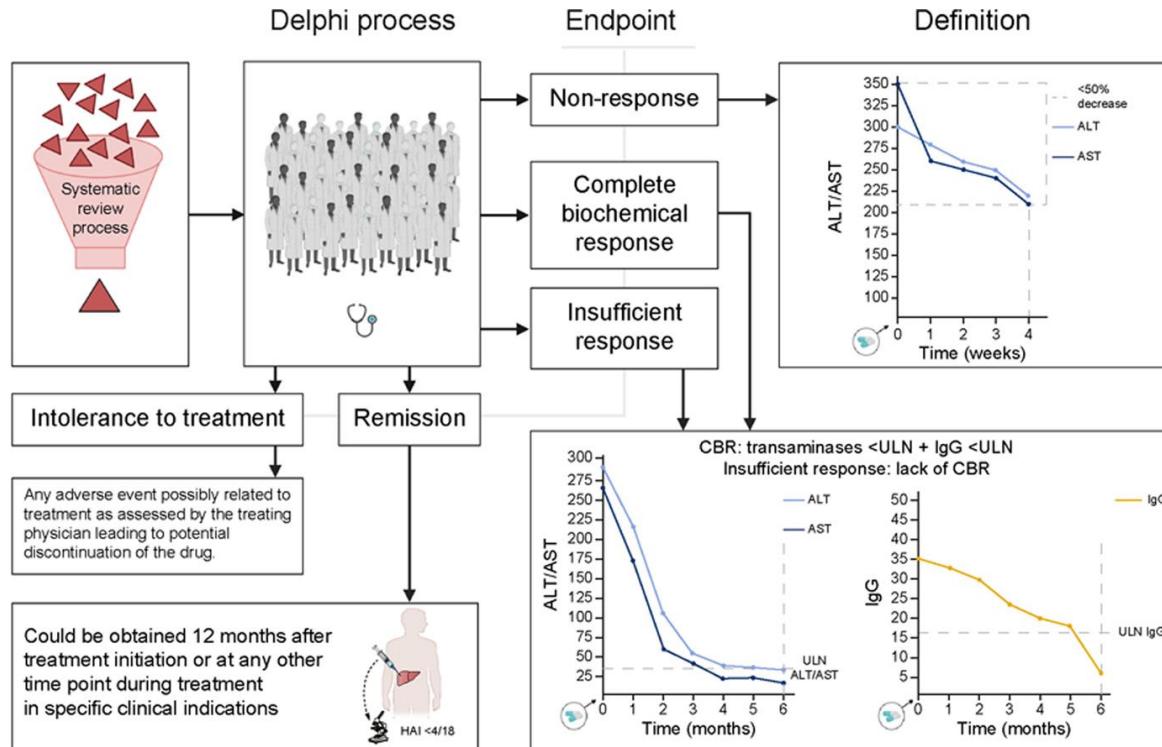

CAMARO studie: verbetering 1^e lijns behandeling

Behandeling

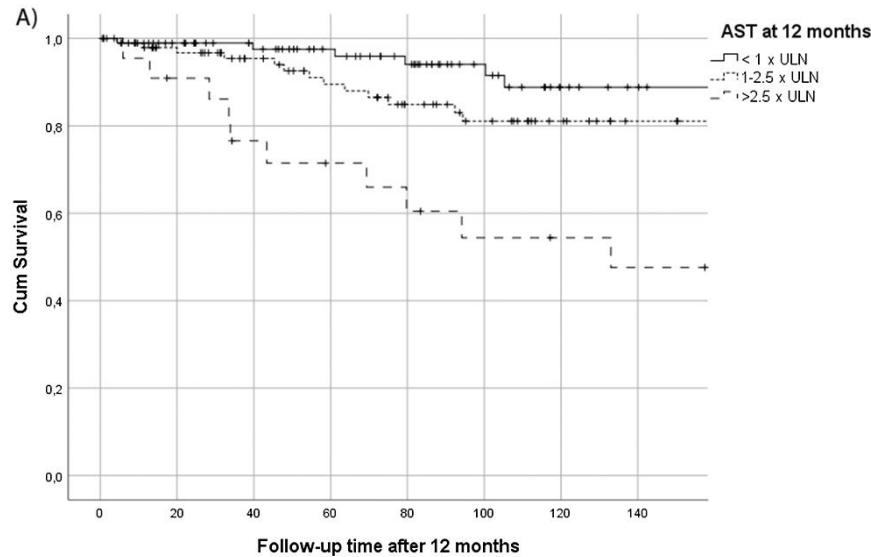

- “*Treatment of AIH should be aimed to obtain complete biochemical and histological resolution of the disease in order to prevent further progression of liver disease*” - EASL guidelines AIH 2015
- Complete biochemische remissie
- Partiële biochemische remissie
- Loss of remission
- Relapse

Definitions response criteria

Ref: Systematic review of response criteria and endpoints in autoimmune hepatitis by the International Autoimmune Hepatitis Group; Journal of Hepatology 2022

Effect van behandeling

Cohort n=301

Effect van AST na 12
maanden op overleving

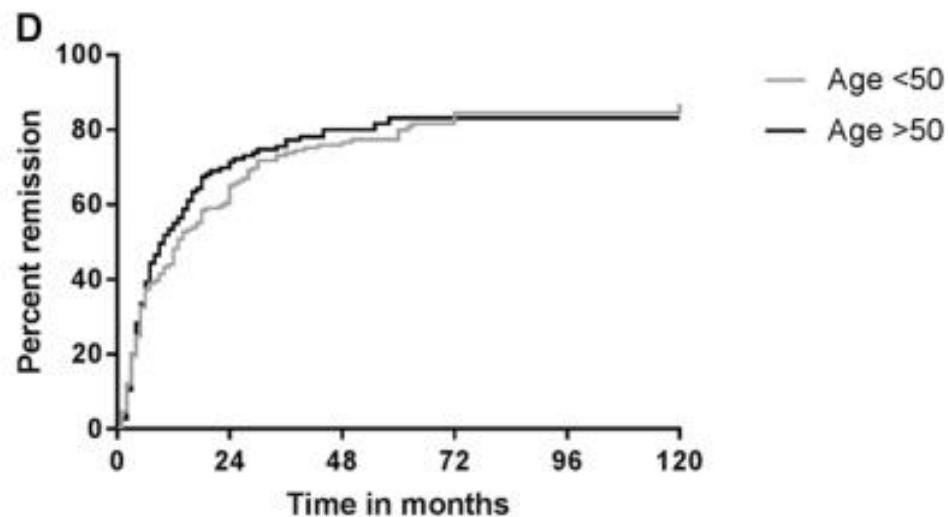

| Months | 0 | 20 | 40 | 60 | 80 | 100 | 120 | 140 |
|-------------|----|----|----|----|----|-----|-----|-----|
| N at risk | | | | | | | | |
| < 1 x ULN | 97 | 81 | 70 | 60 | 51 | 37 | 26 | 22 |
| 1-2.5 x ULN | 96 | 83 | 69 | 59 | 49 | 41 | 32 | 25 |
| > 2.5 x ULN | 22 | 19 | 15 | 13 | 11 | 9 | 8 | 7 |

Ref: Aminotransferases during treatment predict long-term survival in patients with autoimmune hepatitis type 1: a landmark analysis; Clin Gas Hep 2022

| | Hazard Ratio (95% CI) | P Value |
|---------------------------|-----------------------|---------|
| 6 mo | | |
| Age | 1.04 (1.02–1.05) | <.001 |
| Cirrhosis at diagnosis | 3.09 (1.62–5.89) | .001 |
| Ln AST × ULN at diagnosis | 0.66 (0.48–0.90) | .010 |
| Ln AST × ULN at 6 mo | 2.61 (1.47–4.61) | .001 |
| 12 mo | | |
| Age | 1.03 (1.02–1.05) | <.001 |
| Cirrhosis at diagnosis | 2.42 (1.21–4.87) | .013 |
| Ln AST × ULN at diagnosis | 0.64 (0.47–0.86) | .004 |
| Ln AST × ULN at 12 mo | 2.13 (1.46–3.11) | <.001 |

Effect gecorrigeerd voor leeftijd, cirrose en AST bij diagnose

Verdubbeling AST → 69% (!)
toename van HR

Behalen van remissie

Na 1 jaar 50% remissie

Uiteindelijk 80% remissie

| | Time | 0 | 24 | 48 | 72 | 96 | 120 |
|---------|----------------|-----|-----|-----|-----|-----|-----|
| Age <50 | N at risk | 174 | 52 | 30 | 16 | 15 | 12 |
| Age <50 | N in remission | 0 | 108 | 125 | 134 | 134 | 135 |
| Age >50 | N at risk | 143 | 35 | 15 | 8 | 6 | 4 |
| Age >50 | N in remission | 0 | 97 | 107 | 109 | 109 | 109 |

Ref: Role of age in presentation, response to therapy and outcome of autoimmune hepatitis; Clin Trans Gastroenterol 2018

- Gedegen onderzoek naar 2^e lijns behandeling hard noodzakelijk
- Kan alleen bij goede (inter)nationale samenwerking

Complement

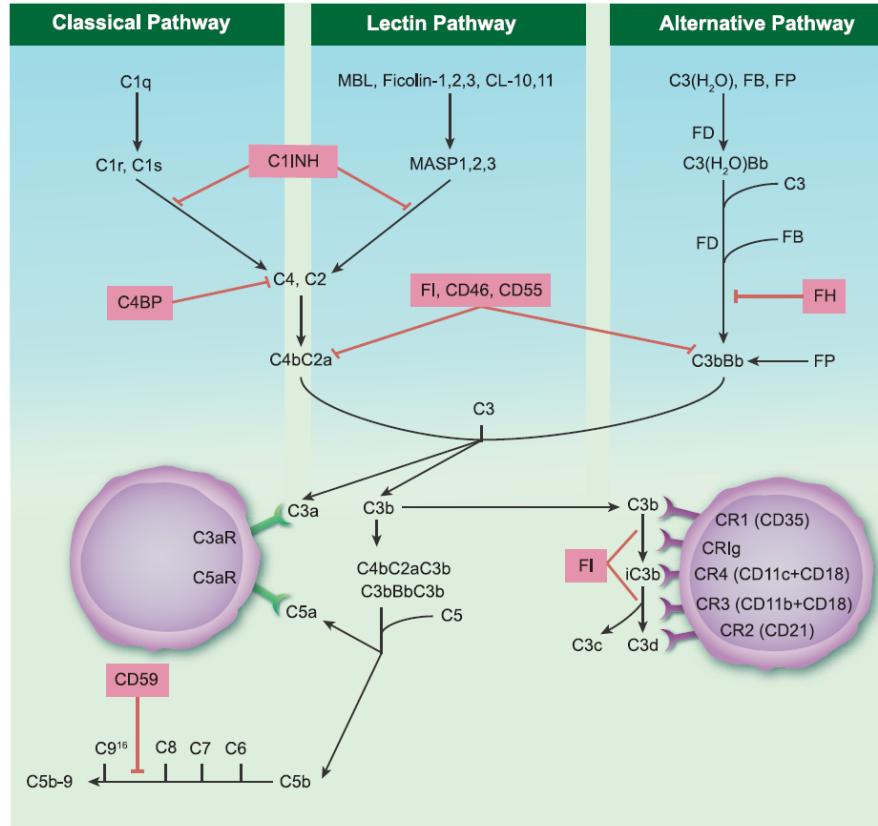

Autoimmune hepatitis

- Chronic autoimmune disease of the liver
- Exact pathophysiology unknown
- Characterized by:
 - Raised total IgG
 - Autoantibodies
 - Interface hepatitis and plasma cells on liver biopsy

Is damage to hepatocytes mediated by complement?

Complement

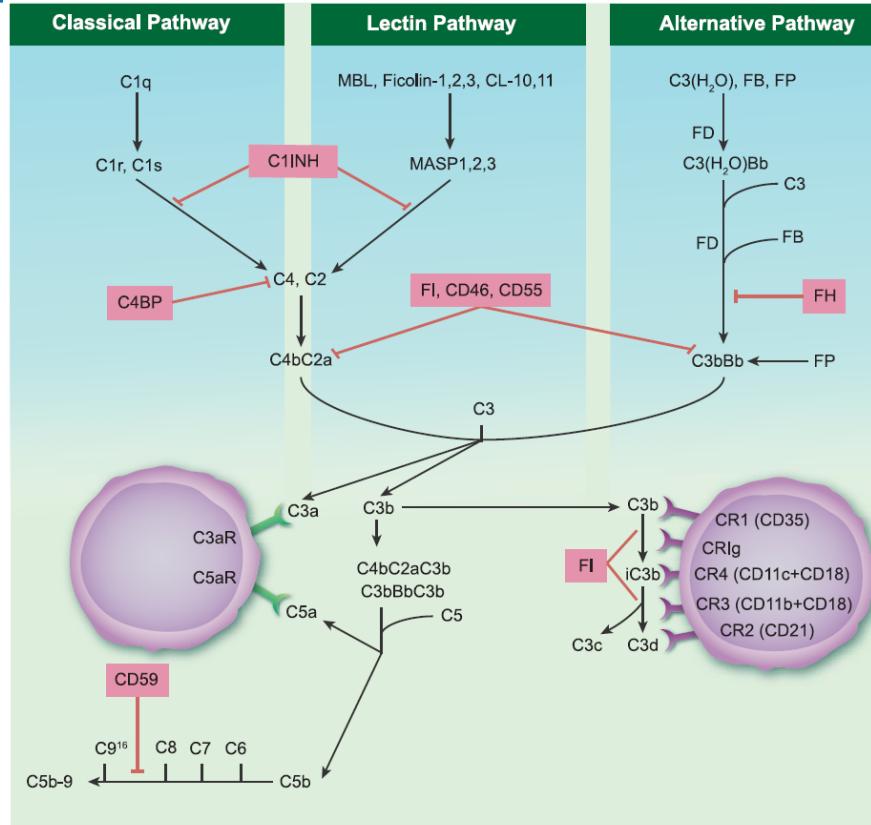

- Proteins of the innate immune system
- Mainly produced by the liver
- Activation results in forming of membrane attack complex and damage of the pathogen/cell

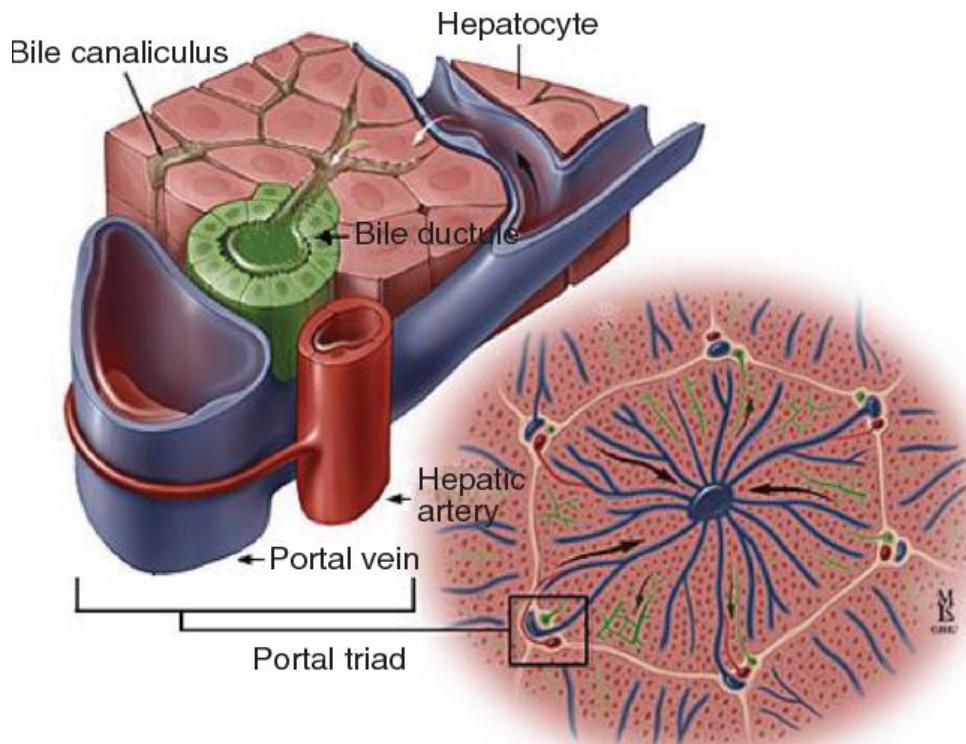

Lubbers et al. 2017 J translation immunology

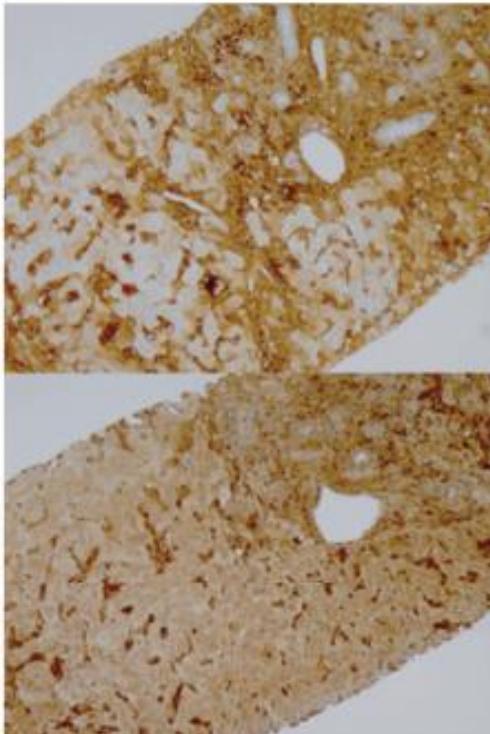

Methods

- IHC on liver biopsies:
 - N=9
 - IgG
 - C1Q
 - C3D
 - C4D
 - C5b9
 - Healthy and positive controls

IgG

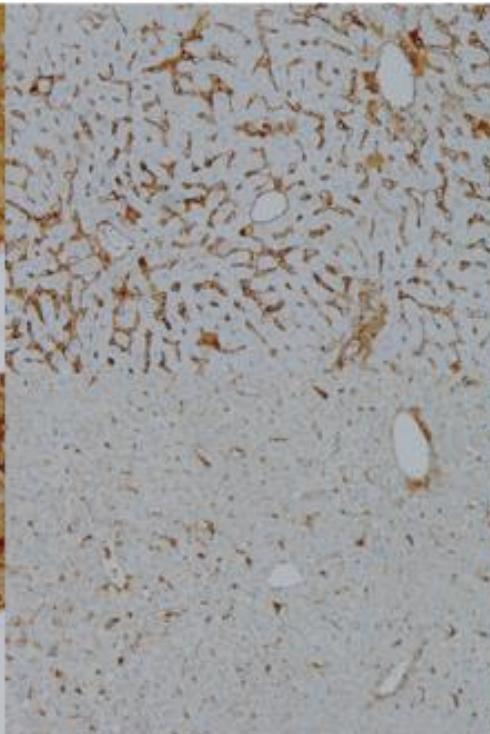

AIH

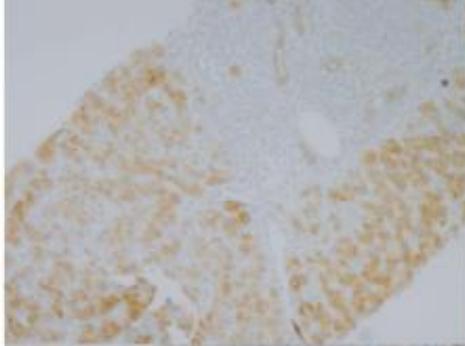

Healthy control

Acute liver failure

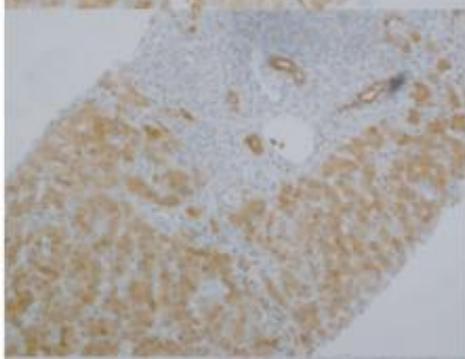

C1q

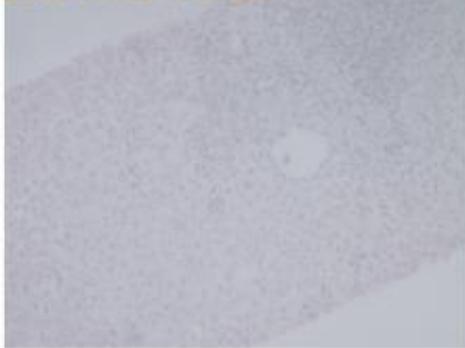

C3d

C4d

C5b9

Conclusie

- Productie van complement vind plaats in de lever
- Ondanks aanwezigheid van IgG en auto-antistoffen geen activatie van complement
- Suggereert dat schade niet via complementactivatie maar via andere routes ontstaat
