Harmonization

The good message, the good music for
Laboratory Medicine

Stichting Kwaliteitsbewaking
Medische Laboratoriumdiagnostiek

Calibration 2000

- Initiated 1998 (Jansen)
- Harmonization and Calibration
- Commutable materials
- Reference method targets where possible
- Biological variation for tolerance limits

Stichting Kwaliteitsbewaking
Medische Laboratoriumdiagnostiek

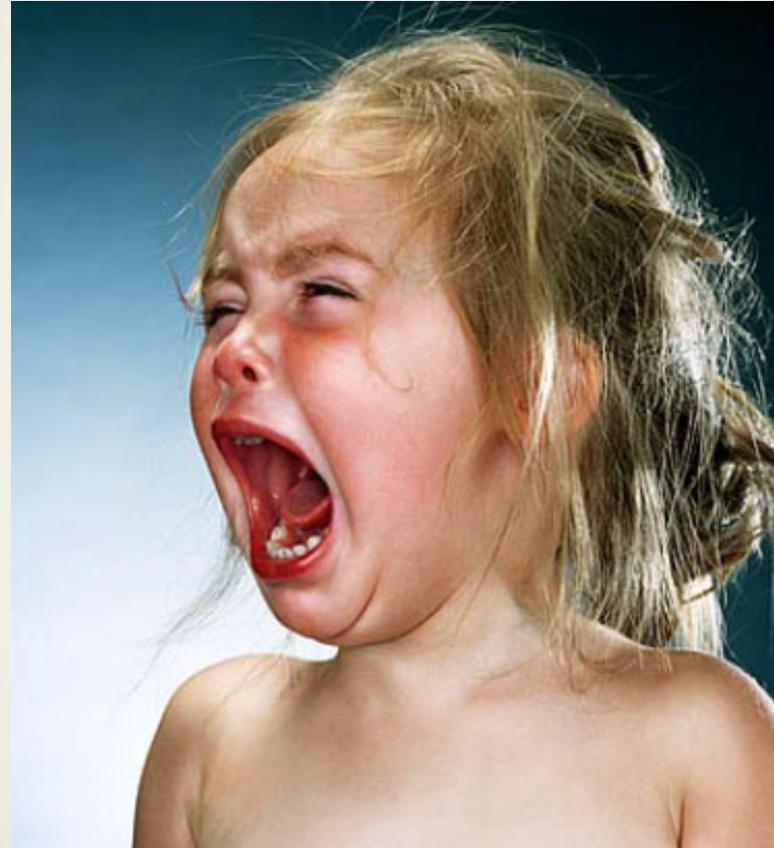

Calibration 2000

- Focus on harmonization
- Various disciplines
 - general chemistry
 - coagulation
 - hemocytometry
 - endocrinology/tumor markers
 - humoral immunology
 - cellular immunology
 - bacteriology/virology
 - histopathology

NL Calibrated in 2011

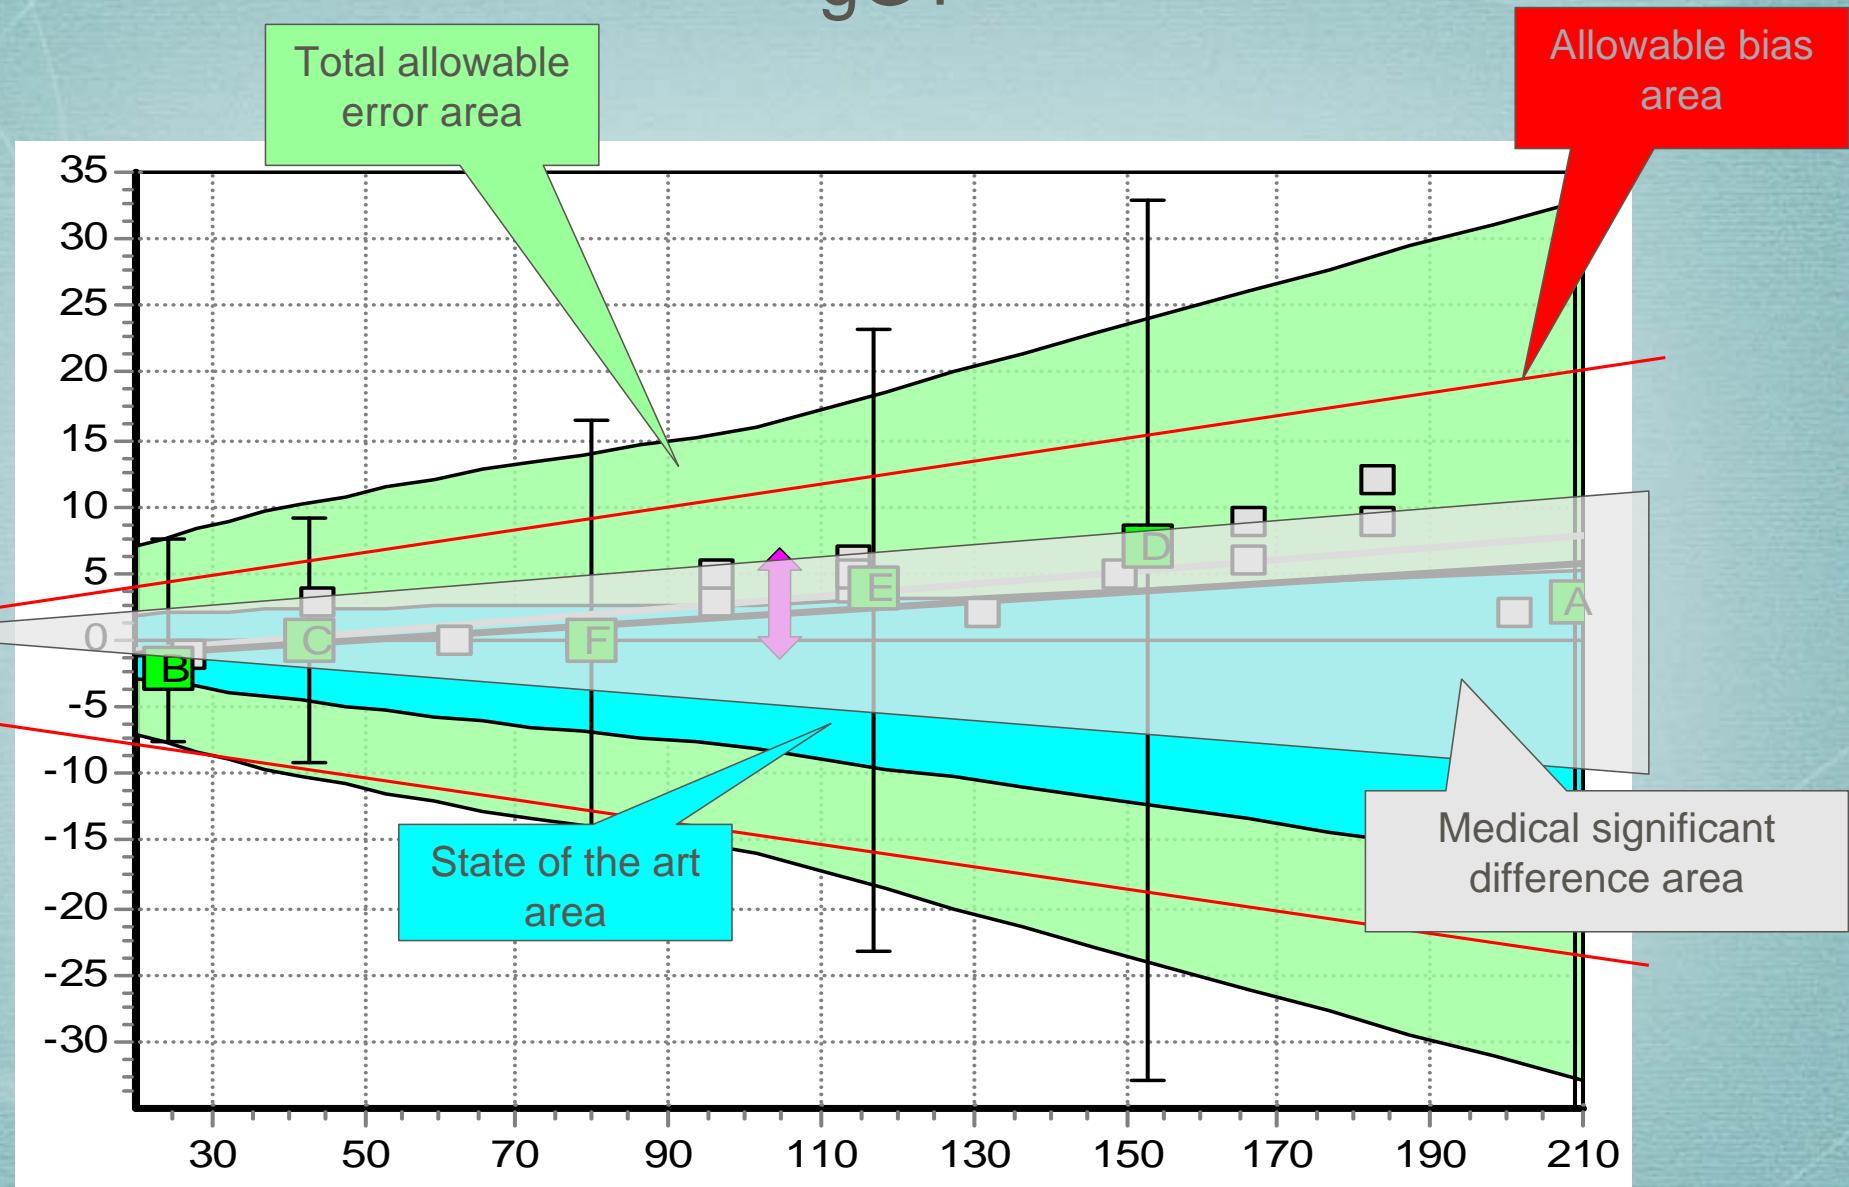

Stichting Kwaliteitsbewaking
Medische Laboratoriumdiagnostiek

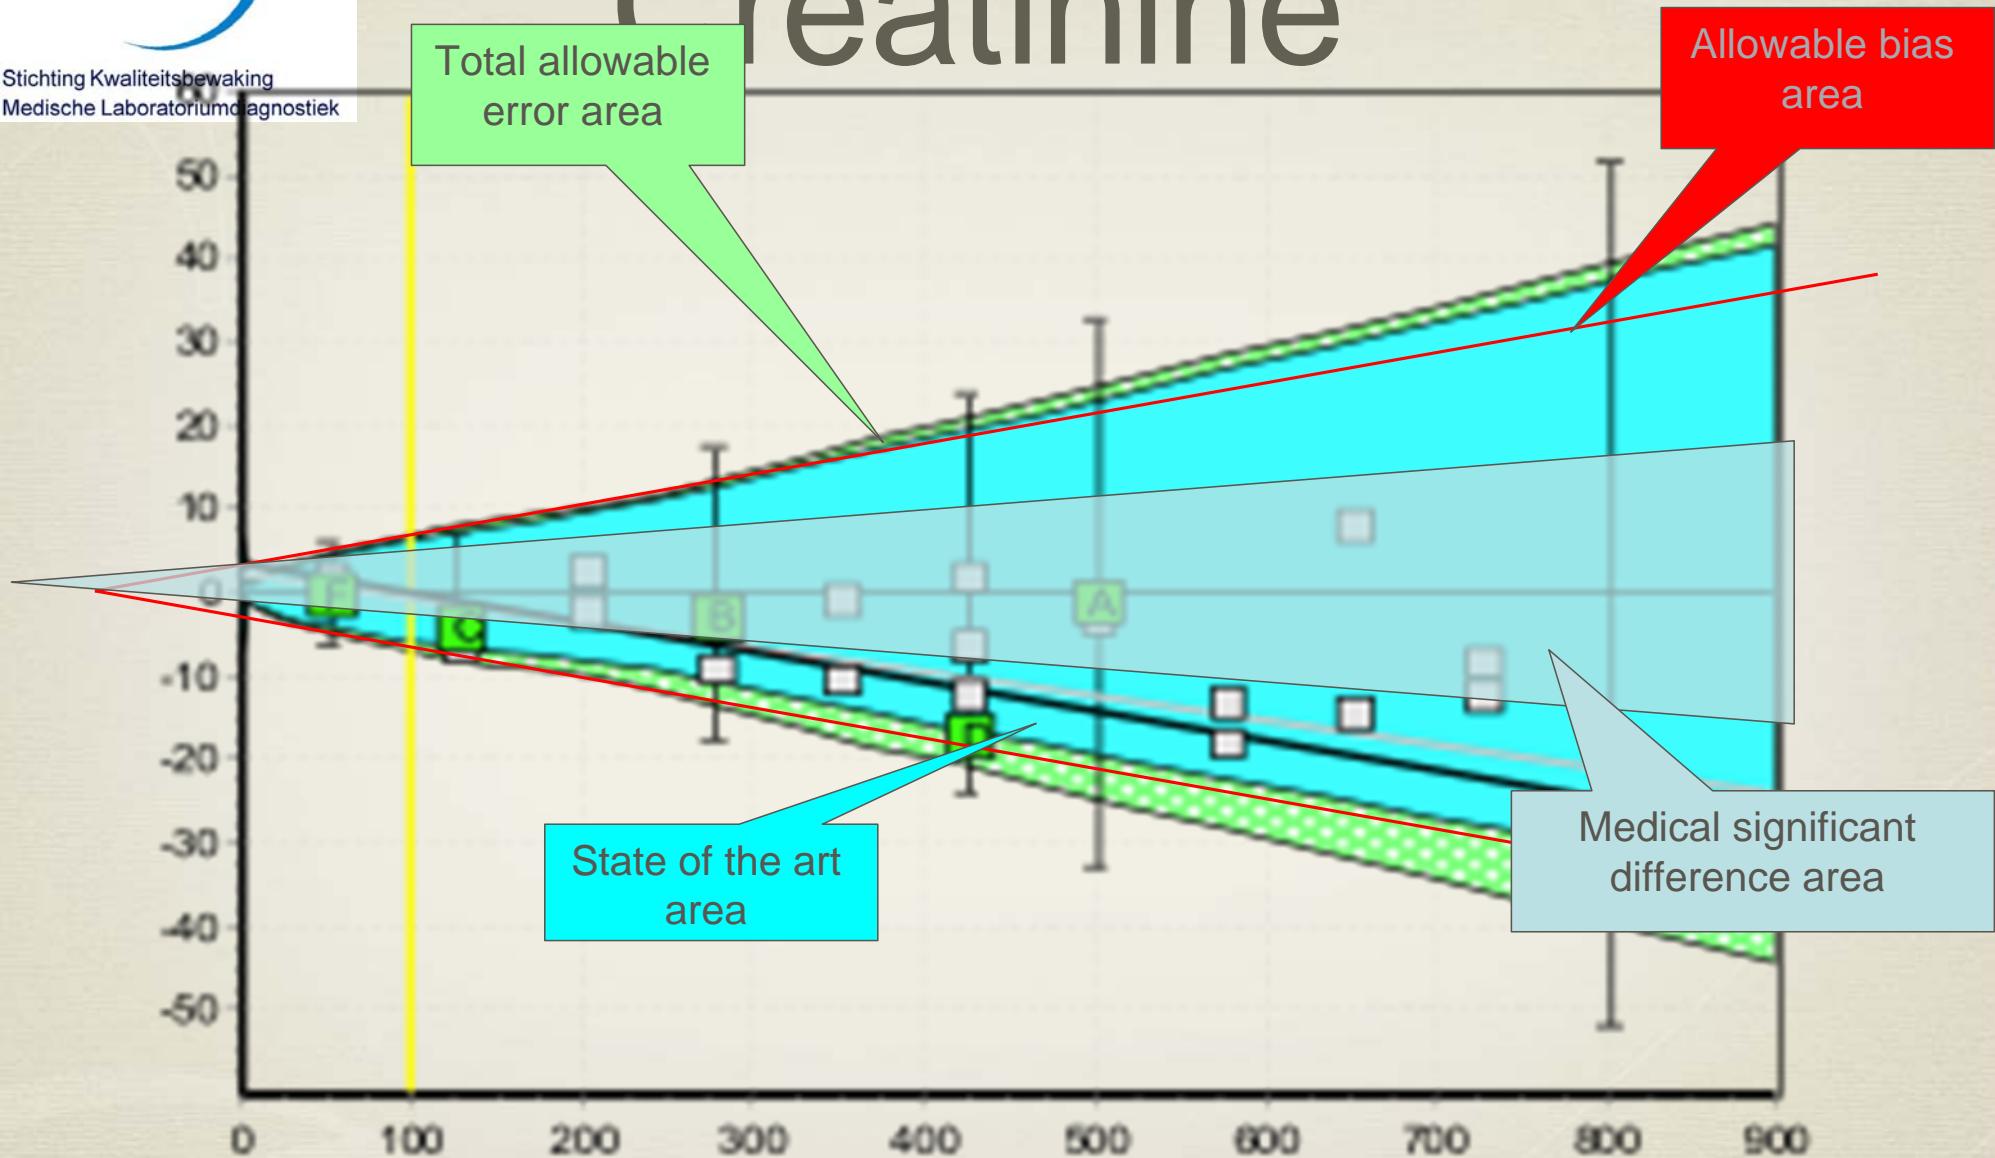

Calibration 2000 Results in 2011

- EQAS changed
- Harmonization of many analytes
- First step towards harmonized reference intervals
- Trueness verification
- IVD post marketing surveillance

gGT

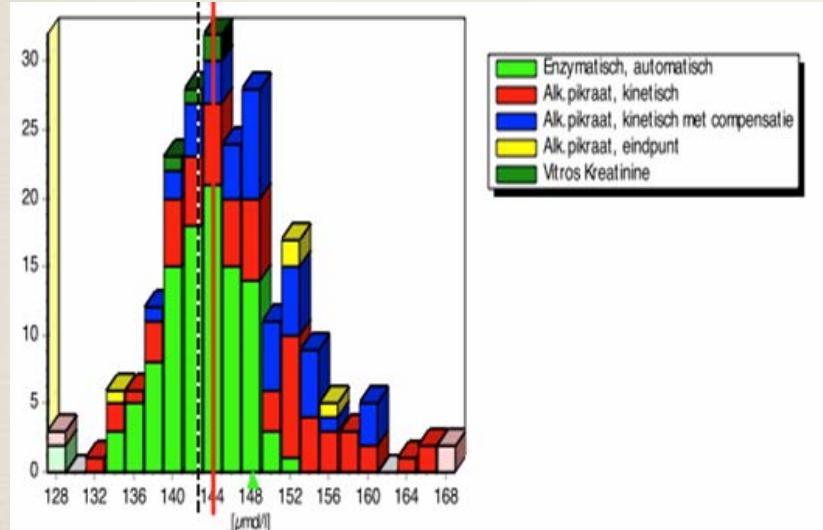

Creatinine

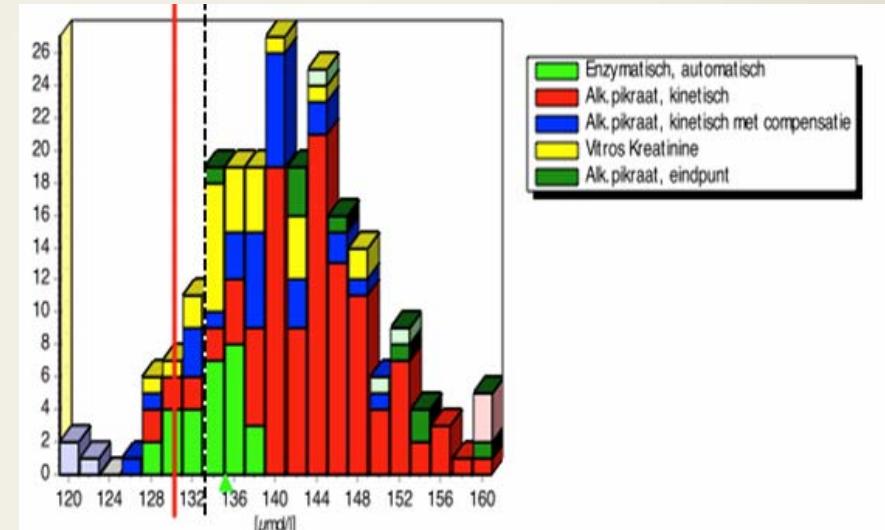

Harmonization of analytes: creatinine

Cobbaert

Kreatinine 2010.4E

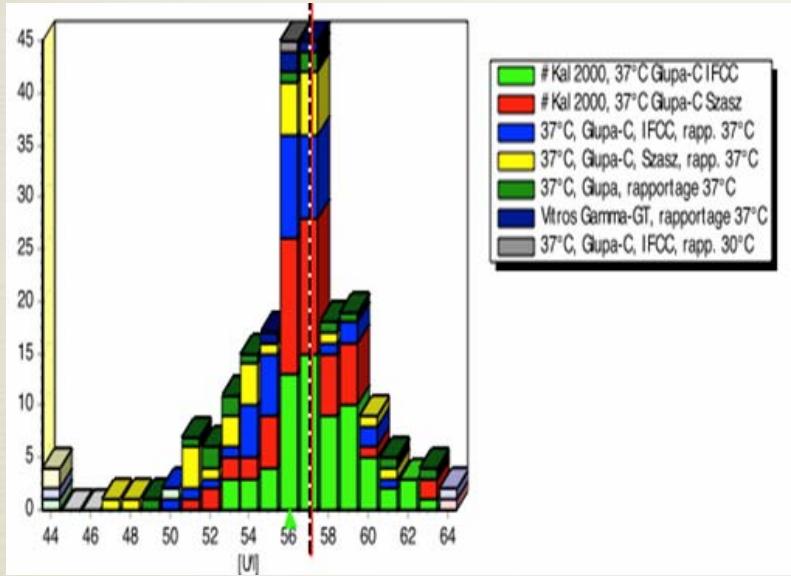

Kreatinine 2005.1C

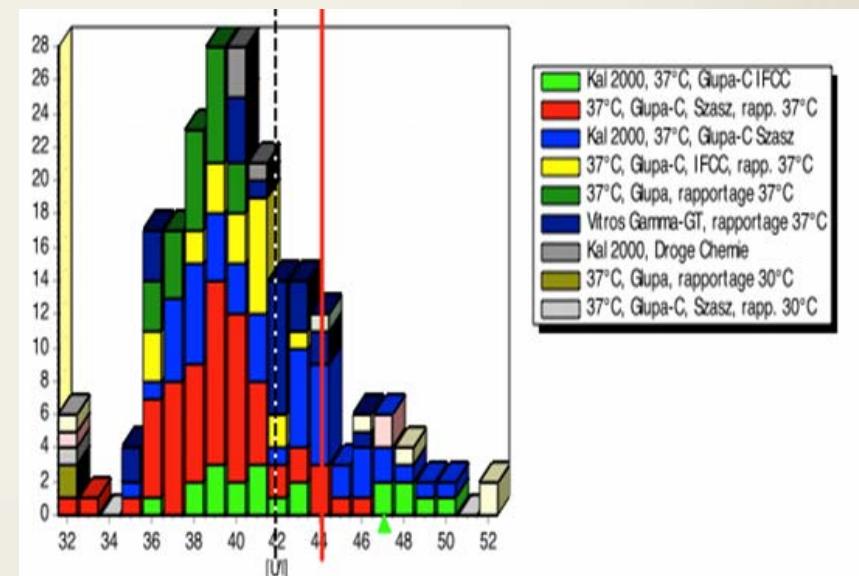

g-GT

Cobbaert

Gamma GT 2010.4 F

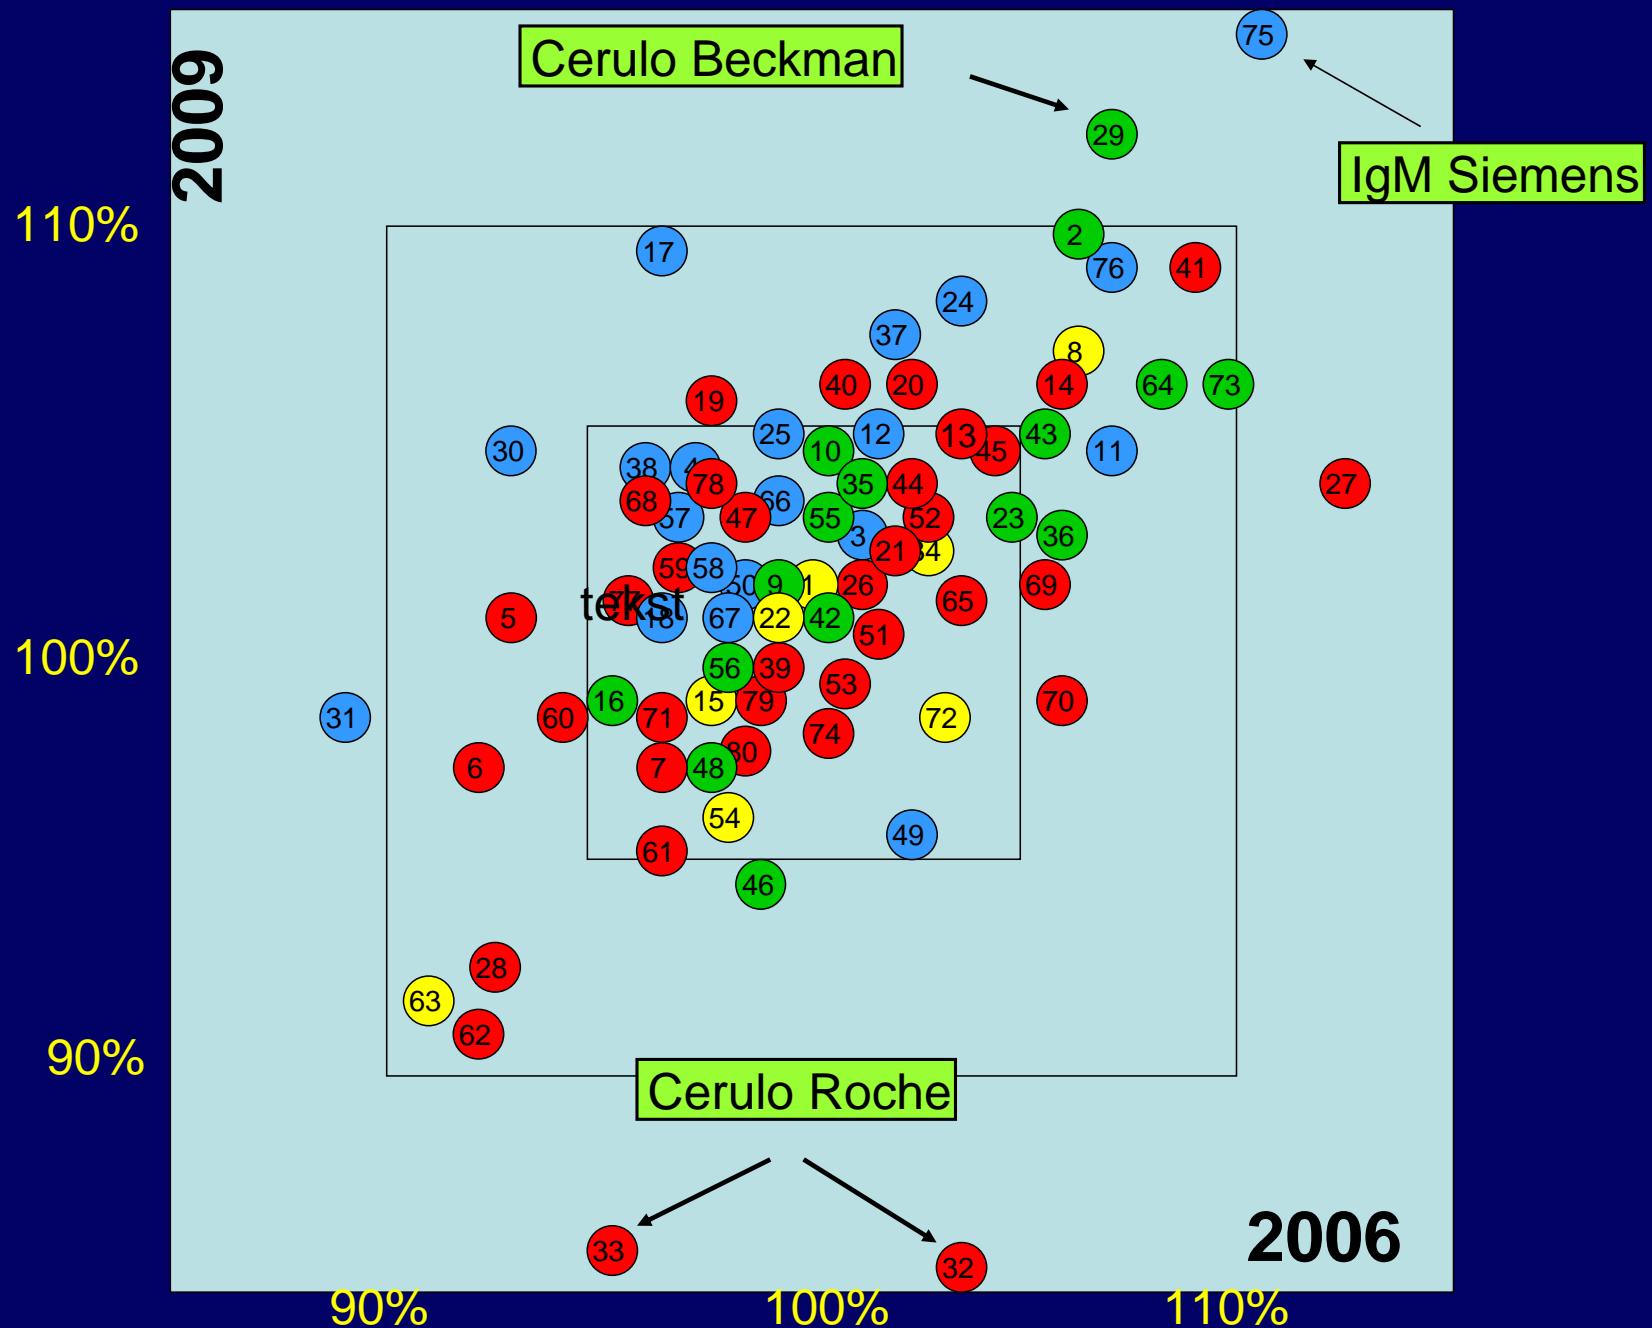

Gamma GT 2005.1 E

Weykamp, Haagen

Conclusions

75% less than 5% from Target

20% between 5 and 10% from Target

5% more than 10% from Target

Ceruloplasmine Roche (low) Beckman (high)

IgM Siemens BNII

General Conclusion

With commutable, stable, CRM-470 targeted EQA samples, the SKML can monitor:

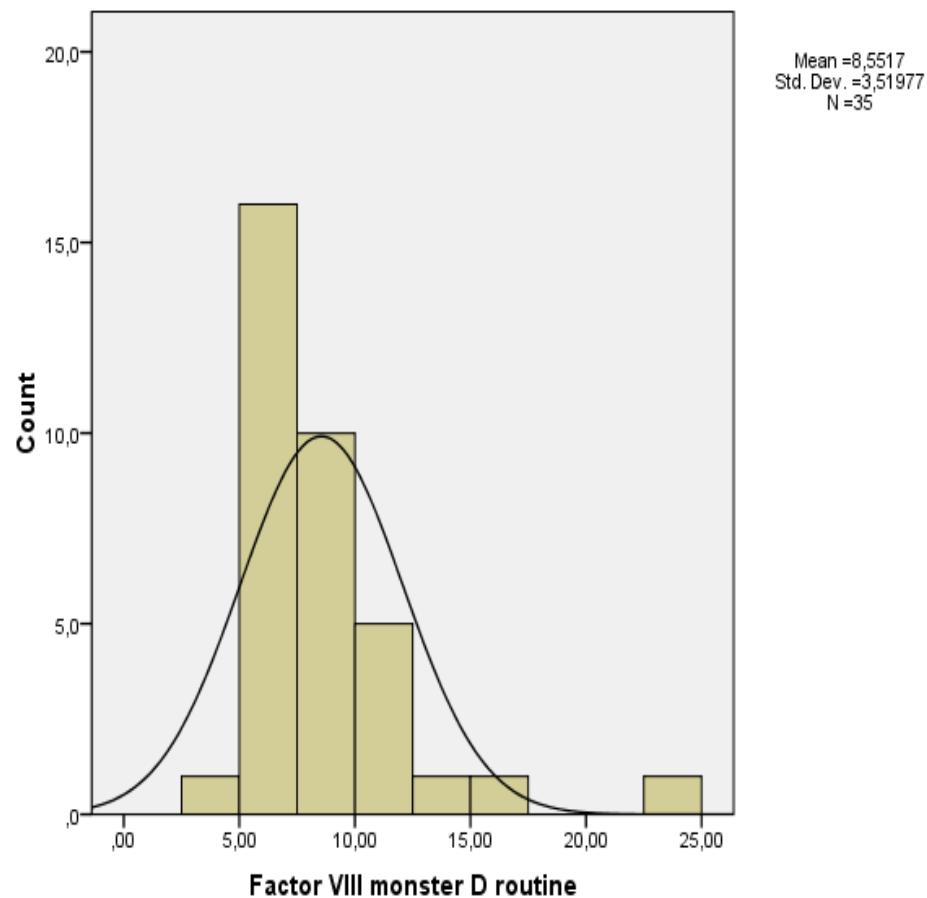

- Performance of individual labs
- Performance of manufacturers
- Performance profession in general

The (trend in) interlab CV is excellent to monitor Harmonisation
